

Please reject petition 04-160. I have XM Radio and find it to be both great for listening to my favorite music and getting updates on traffic in my area as well as weather updates etc. I can get this information constantly and don't have to wait as I do on the regular AM channels. This information is also clearer, and the signal is generally better especially when compared to AM where service can be spotty or noisy. This is a service I pay for and feel I get my value's worth out of it and I do not think it is up to the National Association of Broadcasters to dictate what I am permitted to hear.
